

SHOTGUN TUBE PRE-LOADING PROCEDURE

1. When the Pre-Load SO gives the “Make Ready” command, point your long gun either towards this sign or muzzle down in the barrel.
 - Close the bolt on an empty chamber
 - Set the safety catch on “Safe”
 - Load the magazine tube or magazine, as appropriate, to division capacity (unless briefed otherwise)

2. Place the pre-loaded long gun into the barrel muzzle down. DO NOT TOUCH IT AGAIN WITHOUT SO PERMISSION.

3. If you wish, you may go and walk the stage while it is being reset but be ready to come back and retrieve your firearm.

4. When called upon by the timer RO, remove the long gun from the barrel and carry it muzzle up or down directly to the start position. Follow the Timer RO’s command to complete your preparations.
